If you have your datasource as a `List<MyBean>` as simple method is:

1. **Pass it** in the parameter map

```
param.put("SUBREPORT_DATA", myBeanList);
```

2. **Define** the parameter in jrxml

```
<parameter name="SUBREPORT_DATA" class="java.util.List"/>
```

3. **Create** a JRBeanCollectionDataSource using your parameter

```
<subreport>
    <reportElement x="0" y="0" width="200" height="100" uuid="406c9014-e74b-42d9-b9e1-
    <dataSourceExpression><![CDATA[new net.sf.jasperreports.engine.data.JRBeanCollecti
    <subreportExpression><![CDATA[$P{SUBREPORT_DIR} + "theSubreport.jasper"]]></subrep
</subreport>
```
